### Abstract

A revised checklist of spider species found in Great Britain and Ireland is presented together with their national distributions, national and international conservation statuses and synonyms. The list allows users to access the sources most often used in studying spiders on the archipelago.

**Keywords:** Araneae • Europe

### Introduction

A checklist can have multiple purposes. Its primary purpose is to provide an up-to-date list of the species found in the geographical area and, as in this case, to major divisions within that area. It is also a guide to the names to be used, giving some stability at national level to ever-changing international nomenclature. This list includes United Kingdom and International Union for Conservation of Nature (IUCN) conservation statuses from Harvey *et al.* (2017). Finally, the checklist can provide users with guidance on how to trace current nomenclature to the most frequently used national identification resources, which are often several steps removed from current usage.

This checklist, like its predecessors, covers the archipelago made up of the islands of Great Britain, Ireland, and adjacent smaller islands. This geographical area covers two countries: the Republic of Ireland (RI) and the United Kingdom of Great Britain and Northern Ireland (UK). The four nations of the UK—Wales, Scotland, Northern Ireland, and England—are included, with one of the UK's Crown Dependencies, the Isle of Man. All 212 species recorded from the Isle of Man are found in England, Wales, and all but 2 in Scotland (Spider Recording Scheme 2019). As biogeographically distinct, the other two Crown Dependencies, the Bailiwicks of Jersey and Guernsey (the Channel Islands) are not included. A list of spider species found only on the Channel Islands but not in the rest of Great Britain and Ireland is included in Merrett, Russell-Smith & Harvey (2014).

The island of Ireland, a geographical and biogeographical unit, is differentiated from the political units on the island by using the names Republic of Ireland and Northern Ireland in situations where confusion is possible.

This checklist updates Merrett, Russell-Smith & Harvey (2014). It is the latest in a long series going back to Blackwall (1861), forming an important record of the developing understanding of the spiders of Great Britain and Ireland.

### Methods

#### *Selection criteria and lists*

The checklist has two main sections; List A contains all species proved or suspected to be established and List B species recorded only in specific circumstances.

The criterion for inclusion in list A is evidence that self-sustaining populations of the species are established within Great Britain and Ireland. This is taken to include records from the same site over a number of years or from a number of sites. Species not recorded after 1919, one hundred years before the publication of this list, are not included, though this has not been applied strictly for Irish species because of substantially lower recording levels.

The list does not differentiate between species naturally occurring and those that have established with human assistance; in practice this can be very difficult to determine.

#### *List A: species established in natural or semi-natural habitats*

The main species list, List A1, includes all species found in natural or semi-natural habitats. List A2 contains a small number of species that are established but have not yet been fully described taxonomically. Species with insufficient records to determine their status are given in List A3. This covers species where records are confined to only one site or to very few individuals, with no evidence of reproduction.

The distinction, made in previous checklists, between species confined to artificial habitats such as greenhouses and species largely confined to other buildings has become increasingly difficult to determine and so species formerly listed as greenhouse species are now included in List A1. Species found almost exclusively in anthropic habitats are identified in the list as:

Ag: exclusively or almost exclusively in greenhouse-like structures.

Ah: exclusively or almost exclusively in houses.

Ab: exclusively or almost exclusively in buildings other than homes, such as warehouses and industrial structures.

#### *List B: species recorded from artificial habitats and as imports*

List B1 covers species recorded as established populations only in large-scale, artificial climate-controlled areas such as tropical biomes and tropical sections of botanic gardens. The extreme climate modification of these habitats is considered enough to exclude these species from List A.

List B2 contains species regularly imported into Great Britain and Ireland, for example with foodstuffs, but with no evidence that they are established.

*Removal of species*

While it seems easy to add species to a checklist, it can be more difficult to remove them, especially given the number of lists that can be found in publications and on the internet. These include species which have at some time been recorded in the literature as Great British or Irish but should no longer be considered so. This can be because the species has not been recorded in Great Britain and Ireland for at least 100 years, or as a result of ambiguity about its taxonomic status and distribution, or because it was recorded from Great Britain and Ireland in error. Nearly 50 such species were found in checklists for Great Britain and Ireland, both online and printed, but are not included here. A further publication is planned to explore these records.

*Nomenclature*

Eighty years ago, Bristowe (1939: 3) wrote “The nomenclature has undergone many changes, and it is feared that we have by no means reached finality yet”. Changes in species, genus, and family names are a constant and essential feature of a developing science but have been for years a source of confusion and annoyance at a practical, day-to-day level.

Previous checklists have largely followed international usage but have departed from this, sometimes wisely, on several occasions. This list follows the nomenclature in the current edition of the World Spider Catalog, in this case version 20.0 (World Spider Catalog 2019), last checked on 1st July 2019.

*Identification*

The use here of currently recognised species names should allow for easy access to world and European literature and to web-based resources. It does, however, present difficulties in using the most commonly consulted identification publications. The inclusion of superseded names from Merrett, Russell-Smith & Harvey (2014) and Roberts (1985, 1987, 1993) should allow users to trace names back through to all these sources. There are currently four main texts used for spider identification in Great Britain and Ireland:

- Bee, Oxford & Smith (2017), covering all families except Linyphiidae, used Merrett, Russell-Smith & Harvey (2014). The second edition (due 2020) will use the names in this list.
- Roberts (1995), again not fully covering Linyphiidae, is close to Roberts (1985, 1987, 1993).
- Roberts (1985, 1987, 1993) remains the major text for species identification in Great Britain and Ireland. All name changes are in the list.
- Locket & Millidge (1951, 1953) and Locket, Millidge & Merrett (1974) are the oldest useful identification guides to spiders in this region. Roberts (1987) listed changes in nomenclature.

*Sources and references*

Country records are taken from the Spider Recording Scheme (SRS) (2019) for Scotland, England and Wales. The SRS does not cover the island of Ireland; the species listed here for these areas are based on van Helsdingen (1996) and McFerran (1997) with species subsequently included.

The full list of references needed to chart the changing nomenclature and distribution of spiders in Great Britain and Ireland is prohibitively long for a print publication. The references in this paper are only to publications directly used; for nomenclature changes only the paper establishing the current name is listed. To untangle the full references for any species on the list, the online World Spider Catalog in its most recent edition should be used <https://wsc.nmbe.ch>.

No references are included for Scottish, English, or Welsh country distributions as the records are available on the Spider Recording Scheme (2019). References are given for species recorded here for the first time. Published sources for Irish records later than van Helsdingen (1996) are included.

**The Checklist**

See Lists A (1–3) and B (1–2) in Tables 1 and 2.

**Discussion**

A checklist, by its very nature, is always a work in progress and the rapid advance of knowledge at both local and global levels means that lists will be out of date as soon as they are published. However the periodic publication of the list should give some stability to the nomenclature used for spider species within Great Britain and Ireland.

The inclusion for the first time of country listings within this checklist should be viewed as experimental and subject to greater change than the overall list. The lists for England, Wales and Scotland reflect with considerable confidence the known distributions. The list for the island of Ireland is likely to be more provisional. In all cases further records and corrections are very welcome.

Table 3 summarizes the current status of spiders within Great Britain and Ireland.

**Acknowledgements**

I would like to thank first of all Peter Harvey, compiler of the Spider Recording Scheme, on which so much of the checklist is based, both for the SRS and for comments on draft lists. Myles Nolan has contributed much to the lists for Ireland and the inclusion of country lists would have been impossible without his help. He and Adam Mantell contributed unpublished records for Ireland. Richard Gallon corrected and commented on the list for Wales. Richard Wilson commented on draft lists, based on his papers on species status (Wilson 2011, 2012). Tony Russell-Smith, Geoff

Oxford and Myles Nolan commented on draft lists and text. Finally, thanks to all the arachnologists who have contributed records to the British Arachnological Society through its journal, newsletter and recording scheme.

Table 1: Species found in Great Britain and Ireland.

**List A1:** species established in natural or semi-natural habitats.

**List A2:** species awaiting taxonomic definition

**List A3:** species with insufficient data to determine status.

Abbreviations: Countries: E = England; S = Scotland; W = Wales; NI = Northern Ireland; RI = Republic of Ireland. Anthropoc Status (AS): Ag = exclusively or almost exclusively in greenhouse-like structures; Ah = exclusively or almost exclusively in houses; Ab = exclusively or almost exclusively in buildings other than homes, such as warehouses and industrial structures. Conservation status: GB = Great Britain designations: NS = Nationally Scarce; NR = Nationally Rare. IU = IUCN international designations: CE = Critically Endangered; E = Endangered; V = Vulnerable; NT = Near Threatened; DD = Data Deficient.

**List A1. Species established in natural or semi-natural habitats**

Species	2014	Roberts	E	S	W	NI	RI	AS	GB	IU
<b>Family ATYPIDAE</b>										
<i>Atypus affinis</i> Eichwald, 1830			E	S	W		RI		NS	
<b>Family SCYTODIDAE</b>										
<i>Scytodes thoracica</i> (Latreille, 1802)			E		W		RI	Ah		
<b>Family PHOLCIDAE</b>										
<i>Pholcus phalangoides</i> (Fuesslin, 1775)			E	S	W	NI	RI	Ah		
<i>Psilochorus simoni</i> (Berland, 1911)			E	S	W	NI	RI	Ah		
<b>Family SEGESTRIIDAE</b>										
<i>Segestria senoculata</i> (Linnaeus, 1758)			E	S	W	NI	RI			
<i>Segestria bavarica</i> C. L. Koch, 1843			E		W				NR	
<i>Segestria florentina</i> (Rossi, 1790)			E	S	W					
<b>Family DYSDERIDAE</b>										
<i>Dysdera erythrina</i> (Walckenaer, 1802)			E	S	W	NI	RI			
<i>Dysdera crocata</i> C. L. Koch, 1838			E	S	W	NI	RI			
<i>Harpactea hombergi</i> (Scopoli, 1763)			E	S	W	NI	RI			
<i>Harpactea rubicunda</i> (C. L. Koch, 1838)		Appendix 2	E						NR	V
<b>Family OONOPIDAE</b>										
<i>Oonops pulcher</i> Templeton, 1835			E	S	W	NI	RI			
<i>Oonops domesticus</i> Dalmas, 1916			E	S	W	NI	RI	Ah		
<b>Family MIMETIDAE</b>										
<i>Ero cambridgei</i> Kulczyński, 1911			E	S	W	NI	RI			
<i>Ero furcata</i> (Villers, 1789)			E	S	W	NI	RI			
<i>Ero apha</i> (Walckenaer, 1802)			E	S					NS	
<i>Ero tuberculata</i> (De Geer, 1778)			E	S					NS	
<b>Family ERESIDAE</b>										
<i>Eresus sandaliatus</i> (Martini & Goeze, 1778)		<i>Eresus niger</i>	E						NR	V
<b>Family ULOBORIDAE</b>										
<i>Uloborus walckenaerius</i> Latreille, 1806			E						NR	NT
<i>Uloborus plumipes</i> Lucas, 1846		not present	E	S	W		RI	Ag		
<i>Hyptiotes paradoxus</i> (C. L. Koch, 1834)			E		W		RI		NS	
<b>Family NESTICIDAE</b>										
<i>Nesticus cellulanus</i> (Clerck, 1757)			E	S	W	NI	RI			
<i>Kryptonesticus eremita</i> (Simon, 1880)	not present	not present			W					
<b>Family THERIDIIDAE</b>										
<i>Episinus angulatus</i> (Blackwall, 1836)			E	S	W	NI	RI			
<i>Episinus truncatus</i> Latreille, 1809			E		W		RI		NS	
<i>Episinus maculipes</i> Cavanna, 1876			E			NI	RI		NS	
<i>Euryopis flavomaculata</i> (C. L. Koch, 1836)			E	S	W	NI	RI		NS	
<i>Lasaola prona</i> (Menge, 1868)	<i>Dipoena prona</i>	<i>Dipoena prona</i>	E		W				NR	E
<i>Lasaola tristis</i> (Hahn, 1833)	<i>Dipoena tristis</i>	<i>Dipoena tristis</i>	E				RI		NS	
<i>Phycosoma inornatum</i> (O. P.-Cambridge, 1861)	<i>Dipoena inornata</i>	<i>Dipoena inornata</i>	E	S	W		RI		NS	
<i>Dipoena erythropus</i> (Simon, 1881)			E		W				NR	V
<i>Dipoena melanogaster</i> (C. L. Koch, 1837)			E				RI		NR	E
<i>Dipoena torva</i> (Thorell, 1875)				S					NR	NT
<i>Crustulina guttata</i> (Wider, 1834)			E	S	W		RI			
<i>Crustulina sticta</i> (O. P.-Cambridge, 1861)			E				RI		NS	
<i>Asagena phalerata</i> (Panzer, 1801)	<i>Steatoda phalerata</i>	<i>Steatoda phalerata</i>	E	S	W	NI	RI			
<i>Steatoda albomaculata</i> (De Geer, 1778)			E		W				NR	
<i>Steatoda bipunctata</i> (Linnaeus, 1758)			E	S	W	NI	RI
